

Your Binding Constraint: **Delivery**

You have jobs but can't fulfill them without chaos. The "ghost truck" problem — trucks generating \$130-160K when they should be at \$310K+. Here's how to fix it.

How This Shows Up

Owner spends 20+ hours/week on scheduling and dispatch.
Revenue per truck under \$200K. First-time fix rate below 70%.
Scheduling is on a whiteboard or memory. Jobs get missed or double-booked.

How It Plays Out by Industry

HVAC: Scheduling complexity — system replacements (4-8 hrs) vs repairs (1-2 hrs) vs emergencies. Without digital scheduling, the dispatcher is playing Tetris blindfolded.

Plumbing: Parts and inventory — techs driving 45 min to supply houses is the #1 margin killer.

Electrical: Permitting and inspection bottlenecks — jobs sit in limbo for weeks waiting for inspections.

The Most Common Mistakes

1. No digital scheduling system
2. The owner is the dispatcher
3. No parts management — supply house runs during jobs
4. No first-time fix tracking
5. Revenue per truck isn't measured

The Fix: Step by Step

Step 1: Move to digital scheduling — ServiceTitan, Housecall Pro, or Jobber. 30-40% fewer errors.

Step 2: Track first-time fix rate for one week. Fix the top reason for callbacks.

Step 3: Stock trucks properly — audit what parts techs most commonly need.

Step 4: Hire a dispatcher at 5+ trucks — owner's time is worth \$200-500/hr on growth.

Step 5: Set revenue-per-truck targets — HVAC: \$310K min, Plumbing: \$250K, Electrical: \$200K.

Do's and Don'ts

Do: Use digital scheduling even for 3 trucks. Track first-time fix rate weekly. Stock common parts on every truck. Measure revenue per truck monthly. Hire dispatch before 5 trucks.

Don't: Let the owner dispatch past \$3M. Tolerate supply house runs as normal. Add trucks before fixing scheduling.

Want the full 6-Vector Roadmap?

This guide covers one constraint. A Growth Blocker Analysis covers all six — I pressure-test your scores against 400+ service business benchmarks and give you a complete growth roadmap in 30 minutes.
