

Your Binding Constraint: Demand

You don't have enough qualified leads to fill capacity. Here's how to fix it — broken down by industry, with specific benchmarks and a step-by-step plan.

How This Shows Up

Trucks sit idle 2-3 days a week. Revenue is flat despite good reviews. You're dependent on one lead source. The owner is the only person generating leads.

How It Plays Out by Industry

HVAC: Highest lead volume requirement. 60% of annual revenue in 4 months. Shops that survive have maintenance agreements creating off-season demand.

Plumbing: More consistent year-round. Emergency calls are high-margin but unpredictable.

Electrical: Lowest volume, highest ticket. Problem is lead quality, not quantity.

The Most Common Mistakes

1. Over-relying on one channel (60%+ from one source = revenue cliff)
2. Underinvesting in marketing (benchmark: 3% of revenue)
3. Treating all leads the same
4. No lead tracking by source
5. The owner is the marketing department

The Fix: Step by Step

Step 1: Audit your current lead sources — pull 12 months of data, categorize every job by source.

Step 2: Fix your Google Business Profile — free, 2 hours, 7× more clicks.

Step 3: Build a second channel — Google LSA if word-of-mouth is dominant, referral program if Google is dominant.

Step 4: Set a marketing budget — 3% of trailing 12-month revenue.

Step 5: Hire or outsource marketing operations at \$3M+.

Do's and Don'ts

Do: Track cost per lead and close rate by source monthly. Diversify to at least 3 meaningful lead sources. Invest in SEO early. Use Google LSA as a bridge. Ask every customer how they heard about you.

Don't: Put all budget into one platform. Chase cheap leads that never close. Ignore your Google Business Profile. Wait until revenue drops to start marketing.

Want the full 6-Vector Roadmap?

This guide covers one constraint. A Growth Blocker Analysis covers all six — I pressure-test your scores against 400+ service business benchmarks and give you a complete growth roadmap in 30 minutes.
