

Your Binding Constraint: Support

Customer issues pile up with no system. The owner is the bottleneck for every complaint. Here's how to fix it.

How This Shows Up

Every complaint goes to the owner. No ticket system — issues tracked in texts and voicemails. First-call resolution below 70%. Issues take 24+ hours for a response. Negative reviews never responded to. Owner spends 10+ hours/week putting out fires.

How It Plays Out by Industry

HVAC: Post-installation issues — new system not working right, thermostat confusion. Most resolvable by trained office staff over the phone.

Plumbing: Emergencies — leak after repair, clog came back. Speed matters more than anything.

Electrical: Safety-related — sparks, burning smells, breakers tripping. Need immediate triage: emergency now or schedule tomorrow?

The Most Common Mistakes

1. No ticket system — issues fall through cracks
2. The owner handles everything — single point of failure
3. No response to negative reviews — permanent advertisement that you don't care
4. No escalation process — every issue becomes an owner issue
5. No root cause tracking — treating symptoms instead of fixing causes

The Fix: Step by Step

Step 1: Set up a ticket system — even a shared Google Sheet is better than nothing.

Step 2: Create a triage decision tree — write down the 10 most common issues and who handles each.

Step 3: Set response time standards — Emergency: 15 min, Urgent: 1 hr, Standard: 4 hrs.

Step 4: Respond to every review from the last 90 days — positive and negative.

Step 5: Track issue types and fix root causes — pick the top issue monthly and eliminate it permanently.

Do's and Don'ts

Do: Log every issue in a ticket system. Create a triage decision tree. Set response time standards. Respond to every review within 48 hours. Fix root causes, not symptoms.

Don't: Let issues live in texts and voicemails. Make the owner the default for every complaint. Ignore negative reviews. Wait until 10+ trucks to build a support system.

Want the full 6-Vector Roadmap?

This guide covers one constraint. A Growth Blocker Analysis covers all six — I pressure-test your scores against 400+ service business benchmarks and give you a complete growth roadmap in 30 minutes.
